INTRODUCTION

By Professor ERNEST WEEKLEY, M.A.

HERE are, in the English language, rather more than 400,000 words. Few of us, between the cradle and the grave, make use of one-tenth of that number. In our reading, however, we encounter a great many which we never, or rarely, employ ourselves, but of which we need, if we are to read intelligently, a clear and accurate explanation. Hence, in the educated household, a description which now applies, or should apply, to all households, a good dictionary is to be regarded as of almost the same importance as a good cookery book. Mental indigestion, due to imperfect assimilation of misunderstood facts and ideas, is as much to be dreaded as bodily indigestion, due to the injudicious treatment of edible substances.

When we first hear or read a strange word, or one which, without being quite unknown to us, seems to have a somewhat unfamiliar ring, our curiosity may take one of four forms. We may desire to know what is its correct spelling, its accepted pronunciation, its exact meaning, its origin. If we are really intelligent people we probably are curious on all four points, or, at any rate, on such of them as lie outside our previous experience of the word. The crossword enthusiast has a fifth motive for opening the dictionary. He may, for instance, be anxious to settle the middle letter of a slippery fish which begins with e and ends with l.

Nobody, however well informed, can ever be quite sure that he will not, even in reading a simple story, suddenly need enlightenment with regard to some word, and the well-informed man who is anxious to remain such will at once proceed to seek that enlightenment in the dictionary. We may divide the reading public into two classes, e.g., those who want to know and those who do not. The first class is ever growing at the expense of the second, while those few who are determined to avoid transfer are intellectually past praying for.

Our earliest dictionaries were concerned with words only. Gradually it has become the practice to include in such works, either in their natural alphabetical order or as appendices and supplements, proper names of persons, whether historical, fictional, or mythological, geographical names, foreign words and phrases which are likely to crop up in an English context and the many technical and commercial terms which come crowding into the language with each advance that science and civilization make. An especially useful addition to an ordinary dictionary is an explanatory list of those abbreviations which, in the hurry of modern life, tend more and more to replace complete words and phrases.

Opinions may differ as to the amount of additional matter of this kind which it is desirable to add to the dictionary, but most people are now inclined to think that a volume which is more and more regarded as the family oracle should contain all the information which it is possible to cram between its two covers, in fact, that a dictionary should, if its full usefulness is to be attained, have encyclopedic character, a word which implies a complete circle of education. Not every family has room or money for all the works of reference which are needed for the real comprehension even of our daily paper, but every family ought to possess one work of reference which summarises in handy form the information which must otherwise be sought from many and various sources.

The dictionary is not a dull book. Some of us are even a little afraid of opening it, having found by experience how one item suggests another and that it is as easy to wander from word to word and from name to name as it is to acquire the bad habit of using the stump of one eigarette to light the next. This insatiable curiosity about words does not affect many people, but a reasonable curiosity as to the real values of our verbal currency should be as natural as the instinct to cat and drink. In fact, in the ideal republic, he who neglected to inform himself on such matters or made a practice of using words without understanding them would be expelled from the community as an undesirable citizen.

NOTE ON THE SCHEME OF PRONUNCIATION

With the exception of g, the consonants employed in the phonetic spelling retain their name sounds, and the vowels, unless marked, retain their short sounds; H represents the guttural h heard in "loch." The digraph aw represents the sound of a heard in "fall;" ou the sound of ow heard in "now;" oo, unmarked, the sound heard in "book;" oo the sound heard in "moon." The surd sound of th is indicated by common letters, as in "thin;" the sonant sound by small capitals, as in "Then." The following is the key to the long and peculiar vowel sounds:—

Fate. far, ado; mē, her; mīne; nôte; tūne; midr.
